

Goshen Plantation

“We had a combination of damage from nematodes and winter kill or spring dead spot. We began treating our greens with Inoculaid and the results have been dramatic. I would have never believed that these greens would have grown back so quickly...it has to be the Quantum Gro!

Not only that, I am starting to play with the irrigation. Normally, this time of year, I would have to give them 15 minutes of water each night. My two weaker greens are at 12 minutes, but all others are at 10 minutes per night. That's a 30% reduction and I think we can go further. They don't need as much water since using Quantum Gro.”
